STREME

Sensitive, Thorough, Rapid, Enriched Motif Elicitation

For further information on how to interpret these results please access https://meme-suite.org/meme/doc/streme.html.

5-CAGCTTCAAA			3.6e-004	8 (80.0%)	↧	

Stopped because maximum number of motifs (5) reached.
STREME ran for 3.13 seconds.

Inputs & Settings

Previous Next Top

Sequences

Role	Source	Alphabet	Sequence Count	Total Size
Positive (primary) Sequences	data_s1_H3K4me3.bed.fa	DNA	10	18967
Negative (control) Sequences	2-Order Shuffled Positive Sequences	DNA	10	18967

Background Model

Source: built from the negative (control) sequences

Order: 2 (only order-0 shown)

Name	Freq.	Bg.				Bg.	Freq.	Name
Adenine	0.253	0.253	A	~	T	0.253	0.253	Thymine
Cytosine	0.247	0.247	C	~	G	0.247	0.247	Guanine

Other Settings

Strand Handling	Both the given and reverse complement strands are processed.
Objective Function	Differential Enrichment
Statistical Test	Fisher Exact Test
Minimum Motif Width	8
Maximum Motif Width	15
Sequence Shuffling	Negative sequences are positives shuffled preserving 3-mer frequencies.
Test Set	There is no test set.
Word Evaluation	Up to 25 words of each width from 8 to 15 were evaluated to find seeds.
Seed Refinement	Up to 4 seeds of each width from 8 to 15 were further refined.
Refinement Iterations	Up to 20 iterations were allowed when refining a seed.
Random Number Seed	0
Trimming of Control Sequences	Trimming of control sequences was allowed.
Total Length	The total length of each sequence set was limited to 4.00e+6.
Maximum Motif p-value	No maximum *p*-value.
Maximum Motifs to Find	5
Maximum Run Time	14400 seconds.
